Declass Review by NGA.

25 February 1964

Dear John:

Re: Viewer

This might be a better subject for a face-to-face discussion but perhaps you can start thinking about the problem.

It is our understanding that one of the principal pieces of equipment used by your people in film exploitation is the Projection Viewer. It is the feeling of our people that they could proceed faster on various studies being done for you if they had one of these machines in-house to check samples with, analyze operating problems against, etc. We would not be so much interested in how it is designed, but more in how it performs.

Undoubtedly, the equipment must be quite expensive and I doubt if we could justify buying one. Do you happen to have an extra one which could be loaned to us for an indefinite period of time?
